

Precise positioning

Dragonfly

What it does

Provides the precise location of a device in 3D with accuracy measured in centimeters.

How it works

Determines the device's location in reference to *Markers* deployed through a venue.

Locate WiFi devices

WiFi Location Monitor

What it does

Real-time locating system (RTLS) for monitoring active Wi-Fi-enabled devices inside buildings or throughout a campus.

How it works

Nodes detect active Wi-Fi devices nearby, uploading data for the server to estimate their locations.

Accuware

Locate, track and monitor people and assets in the real world

About us

A global provider of location technology, our products are building blocks in the implementation of location-aware applications in many industries

Indoor GPS

Indoor Navigation

What it does

Indoor positioning system (IPS) to build custom iOS and Android navigation apps by providing them with their current location.

How it works

Indoors app on the device scans ambient signals to compute its location.

Remote device tracking

Wearabouts

What it does

Follows in real time the movements of Android and iOS smart phones, tablets and wearables, as well as asset tags.

How it works

Wearabouts app collects ambient WiFi and iBeacon signals, and camera shots, for the server to compute the device's location.

Identify individuals

Video Identification

What it does

Video analyzer that identifies individuals based on physical features and “remembers” if they have been seen earlier.

How it works

Video feed from cameras is streamed to the server, which identifies individuals and alerts if they have been seen before.
